

Tech Tips

No 5: Using the iPod in the Classroom

Do you have lots of audio, pictures, and video in digital format? The video iPod provides a way for you to carry your class presentations in your pocket, and allows for display in smart classrooms on campus.

Use free software to organize your materials into presentations, load them onto a video iPod, and plug-in to a smart classroom to present to your class through the projector or smartboard.

The video iPod makes your audio, pictures, and video mobile and works with smart classrooms on campus!

Could your class use its own radio station?

Podcasting is a technology that allows anyone to 'broadcast' their content using the web. It makes it simple to deliver multimedia content. Once you subscribe to a podcast, easy-to-use software retrieves new content automatically. You can also load your podcast content onto a portable device such as the iPod so you have it with you on-the-go.

Subscribe to podcasts and have your multimedia with you on-the-go!

Don't own an iPod or a video iPod? iPod-related technologies can still be very relevant to your classroom. Contact the Language Center to find out how!
